## PROJECT SUMMARY

### Objective

Share my resume using custom and default Salesforce resources (developer license). The final user will be able to check all topics of my resume and can use a system created by me. Also, a sample of a car insure system will be available as well.

### Goals

- Access to guest users (identification isn't necessary);
- Access to registered users (the license will be removed after 2 days or when the number of users to reach the limit);
- Allows the users access using social networks or corporative login (Linkedin, Facebook, Google, Microsoft and Salesforce);
- Show a list of my developer skills and technology summary using a dynamic tree/WBS structure;
- Show a list of my professional experience;
- Show my Education and Credentials list;
- Allows the user to ask questions and give feedbacks;
- Allows the user to use a chat to talk with me when I'm available;
- Show a Life Insurance App Sample using Salesforce resources;
- Allows the final user to send my resume by email in PDF format;

### Project Limits

The topics listed below will not be part of the project outline, due limits of time and license:

- External object using ODATA connection (I've the knowledge to do that, but unfortunately, I don't have time and a free server to do that);
  - Nothing using Python or Java;
  - REST servers will not be used in this project
-

---

## REQUIREMENTS SUMMARY

You can see below the requirements to build the system:

Requirement	Salesforce Community	Salesforce Service	Design
Login Page	x		x
